Overall Business Sentiments for Q2:2016-17 appear Optimistic based on IOS

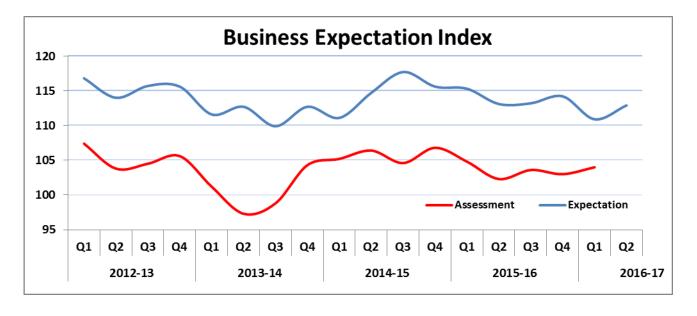

The 74th round of the Reserve Bank of India's Industrial Outlook Survey (IOS) indicates optimistic business sentiments. This round of the survey was conducted during April-June 2016. The survey elicited response from 1,275 manufacturing companies. It provides qualitative **assessment** of business situation of companies in the Indian manufacturing sector for **Q1:2016-17** and their **expectations** for the ensuing quarter **Q2:2016-17**. The 73rd round (Q4:2015-16) survey results were released on April 05, 2016 on the RBI website.

The survey results are those of the respondents and are not necessarily shared by the Reserve Bank of India.

Highlights:

Assessment for Q1:2016-17

- The Survey indicates improvement in demand condition in Q1:2016-17 as compared with Q4:2015-16. Net percentage responses indicating higher production, order books, exports/imports and employment during the quarter went up.
- Availability of finance was perceived to have slightly improved. However, sentiments on cost
 of finance and cost of raw material, to a greater extent, deteriorated. The pricing power of the
 corporates appeared to have improved.
- Overall, the business sentiments of the Indian manufacturing sector, as inferred from the Business Expectation Index (BEI), was slightly more upbeat than the previous quarter.

Expectation for Q2: 2016-17

- The outlook on business sentiments appears to be more optimistic for Q2:2016-17. The BEI rose from 110.9 (for Q1: 2016-17) to 112.9 (for Q2: 2016-17).
- Optimism in business sentiments is expressed in all major parameters barring cost of raw material.

_

 $^{^1}$ Net Response (NR) is the difference of percentage of the respondents reporting optimism and that reporting pessimism. The range is -100 to 100. Any value greater than zero indicates expansion/optimism and any value less than zero indicates contraction/pessimism i.e., NR = (I - D); where, I is the percentage response of 'Increase/optimism', and D is the percentage response of 'Decrease/pessimism' and E is the percentage response as 'no change/Equal'; I+D+E=100. For example, increase in production is optimism whereas decrease in cost of raw material is optimism.

² The Business Expectation Index (BEI) is a composite indicator calculated as weighted (share of GVA of different industry group) net response of nine business indicators. The nine indicators considered for computation of BEI are: (1) overall business situation, (2) production, (3) order books, (4) inventory of raw material, (5) inventory of finished goods, (6) profit margin, (7) employment, (8) exports and (9) capacity utilisation. It gives a single snapshot of business outlook in every quarter. BEI lies between 0 to 200, and 100 is the threshold separating expansion from contraction.
